linkedin.com/in/prem-jadwani-5b8748221

Profile: Software engineer with 1.5+ years in full-stack development, distributed backend systems, cloud, and production AI.

Skills

Languages: Go (Golang), TypeScript, Python, C++

Backend & APIs: Node.js, Express.js, FastAPI, RESTful APIs, gRPC, Kong API Gateway, Model Context Protocol (MCP) servers, Zod

Frontend: React.js, Next.js, JavaScript, WordPress, Eleventy

Cloud & DevOps: AWS, Azure Container Apps, Docker, Kubernetes, Terraform, Continuous Integration/Continuous Deployment (CI/CD), Apache Airflow

Databases: PostgreSQL, MongoDB, MySQL, Redis

AI & Testing: Retrieval-Augmented Generation (RAG), LLM APIs, Gemini 2.5 Flash, Azure Form Recognizer, Jest, Git, Linux

Professional Experience

Value AI Labs 09/2025 – Present
Full Stack Developer Bengaluru, India

- Scaled an AI-powered mortgage document platform to process 150–200-page packages across 66 categories by building TypeScript, Next.js, React.js, Node.js, and PostgreSQL classification and verification workflows.
- Shipped async autosave, undo/redo, schema migration, and duplicate handling across 9 product PRs and 250+ commits by owning backend APIs, data models, and reviewer-facing React.js features.
- Improved reliability across signatures, notary stamps, missing pages, and duplicate documents by integrating Gemini 2.5 Flash Vision and Azure Form Recognizer with Zod validation and Jest regression tests.

Razorpay 03/2025 – 08/2025
Software Developer Intern Bengaluru, India

- Reduced manual authorization-policy updates by 60% by developing Go and gRPC Edge Control tooling integrated with Kong API Gateway on Terraform-managed AWS infrastructure.
- Reduced enterprise AuthZ API latency by 30% by implementing pagination, strengthening access-control logic, and optimizing Redis-backed request processing across distributed systems.
- Reduced AuthZ Enforcer CPU utilization by approximately 40% by optimizing Protocol Buffer unmarshalling and caching, increasing throughput under production load.

STMicronics Pvt. Ltd. 01/2025 – 03/2025
Software Developer Intern Greater Noida, India

- Reduced failure-log triage by 40% across 5,000+ entries by building a Python-based machine-learning classifier.
- Automated 5,000+ failure records by building Apache Airflow ingestion, classification, and reporting pipelines.

Key Projects

AI Astrologer – RAG-Based Conversational Platform 04/2026 – Present

- Delivered English, Hindi, and Hinglish streaming chat by building a Next.js and React.js application with Retrieval-Augmented Generation (RAG), LLM function calling, and deterministic Vedic tools.
- Reduced unsupported answers across two core flows by grounding responses in indexed knowledge, structured tool outputs, and safety checks.

Role-Based Incentive Management CRM 05/2026 – Present

- Enforced four permission levels by implementing Role-Based Access Control (RBAC) for employees, managers, directors, and administrators using Node.js and PostgreSQL.
- Enabled no-code field configuration by storing definitions and options in PostgreSQL and deploying the application on DigitalOcean.

Education

Thapar Institute of Engineering and Technology, Patiala 2021 – 2025
B.E. in Computer Engineering CGPA: 8.20/10.0
